

1       **51053/JEC/B600 -**

WHAT IS CLAIMED IS:

- 5       1.     A method in a mobile set for selecting data to be stored, comprising:  
          (a)    displaying a plurality of recording modes; and  
          (b)    indicating a selection means for choosing a recording mode.
- 10       2.     The method of claim 1, further comprising step (c) providing a  
confirmation signal after a selection means for choosing a recording mode has  
been selected.
- 15       3.     A method in a mobile set for replaying recorded conversations, comprising:  
          (a)    displaying a line indicating a data structure of recorded  
conversations; and  
          (b)    in response to selection of the displayed line, replaying a recorded  
20       conversation.
4.     A method in a mobile set, for replaying previously recorded conversations  
during a real time conversation, comprising:  
          (a)    displaying a list of data structures representing recorded  
25       conversations; and  
          (b)    in response to selection of the displayed list, replaying at least a  
portion of a data structure.
- 30       5.     The method of claim 4, wherein the displaying of a list of data structures  
can be accessed during a real time subscriber conversation using the mobile set  
without interfering in the communication between the subscriber and a base  
station.
